originally published in 1928 this title attempts to give a short historical outline of the treatment which temperament had received at the hands of psychological theory from the time of hippocrates temperament had figured in philosophical and psychological writings as one of the constituents which determine behaviour the language in which it had been treated had been vague and obscure and this combined with the equally indeterminate associations which were carried over from the speech of everyday life at the time had contrived to surround the subject with an atmosphere of unreality which was in sharp contrast to the significance of the role assigned to it

originally published in 1984 this title looks at the development of temperament in early life at the time of publication there were three major perspectives on temperament paediatrics individual differences in infants and inherited personality traits that appear in early life whatever the diversity of these perspectives they converge on personality traits that develop early in life hence the title of this book the authors start by looking at the main research in this field then go on to discuss their own approach to temperament building on their original theory from 1975

the book presents an empirical model of commonly occurring individual differences in children that is derived from a large scale research effort assessing parental and teacher perceptions of children in middle childhood it examines eight characteristic behavioral traits most of which have been widely shown to be present in infants toddlers and preschool aged children the book demonstrates the importance of considering profiles of these relatively stable individual differences for the educational social and emotional life of the child it describes characteristic behaviors of children within each profile emphasizing the assets and liabilities of each and how they are perceived by their parents teachers and peers chapters explore issues related to the most developmentally effective management of children exhibiting each profile type in addition the book addresses a critical need in child development parenting and teaching to understand the wide range of individual differences observed every day in school aged children not only does this volume underscore that commonly occurring differences can be understood as being normal and do not suggest a pathology it also discusses implications of the model in diagnosing pathology the book describes what is known about the stability of temperament behaviors and profiles across the lifespan as well as the origins of these behaviors key topics addressed include nurturing development of well adjusted children causes of individual differences in children s behavior temperamental tendencies and profiles of children diagnosing psychopathology in children this book is a must have resource for researchers professors and graduate students as well as clinicians and related professionals in developmental clinical child and school psychology social work public health pediatrics family studies educational psychology and counseling and all other interrelated disciplines
